SUMMARY

DevOps Engineer with 5+ years of infrastructure and operations experience in enterprise telecommunications (MTS, Russia's largest mobile operator). Specialised in running on-premises big data platforms (Hadoop, Spark, Airflow) and building CI/CD from scratch for cross-functional data teams. Strong focus on DevSecOps and automation, with a track record of cutting platform incidents by about 50%. Currently expanding cloud-native skills (AWS, Terraform, Kubernetes) through my own infrastructure project.

PROFESSIONAL EXPERIENCE

DevOps Engineer | MTS Web Services (MWS), Pskov, Russia

Jan 2024 to Jun 2026

MWS is the cloud and IT services arm of MTS. Sole DevOps engineer in a 17-person big data team (Customer 360 and management reporting).

- Provisioned 20 edge nodes on a petabyte-scale on-premises Hadoop cluster via the private-cloud (OpenStack) self-service and automated their configuration with Ansible, supporting my team and 3 neighbouring data teams
- Built several hundred CI/CD pipelines from scratch in GitLab CI (Airflow DAGs, Python packages to Artifactory, Docker images to Harbor, Ansible runs with security checks), enabling 15 data engineers and analysts to deploy on their own every day, with up to 200 DAGs per node
- Led the infrastructure side of the product "Data Assistance" from planning to stable production within 6 months
- Embedded DevSecOps as the team's Security Champion: automated vulnerability scanning with Trivy, Semgrep and pylint in IDE and CI/CD for the whole 17-person team
- Set up Kerberos authentication on the edge nodes (kinit, keytab generation) and moved keytabs and secrets to HashiCorp Vault
- Built monitoring and alerting with Prometheus, VictoriaMetrics and Grafana
- Wrote a low-level design of the architecture and dozens of Confluence pages on my own initiative, used by about 100 colleagues; moved the architecture documentation to diagrams as code

Stack: Linux (Oracle Linux 8), Bash, Python, Ansible, GitLab CI, Git, Docker, Apache Airflow, Apache Spark, Hadoop, Artifactory, Harbor, PostgreSQL, Prometheus, VictoriaMetrics, Grafana, Trivy, Semgrep, HashiCorp Vault, Kerberos, Jira, Confluence

Data Warehouse Developer | MTS Web Services (MWS), Pskov, Russia

Aug 2021 to Dec 2023

Operations and incident management for a company-wide analytics and reporting platform used by senior management.

- Cut recurring platform incidents by about 50% (from 2,000+ to about 1,000 per year) by automating the resolution of recurring errors and writing 50+ Confluence articles; recurring incidents are now resolved several times faster
- Coordinated the recovery after a complete Teradata outage (2022), prioritising business-critical data marts and restoring all of them within about 2 weeks
- Performed root cause analysis and bug fixing in Oracle PL/SQL, SAS and Teradata, meeting SLAs of up to 12 hours for management reporting (Remedy ITSM)
- Completed a 12-month retraining as a Linux system administrator alongside the job and moved internally to DevOps

Stack: Oracle (PL/SQL), SAS, Teradata, SQL, Linux, Bash, Remedy ITSM, Confluence, Jira, Git

Telecommunications Engineer | Rostelecom, Pskov, Russia

Aug 2019 to Aug 2021

- Diagnosed and resolved 3 to 7 physical and network layer faults per day on a PON fibre network serving several thousand regional customers, using OTDR and network diagnostics
- Promoted from cable technician to engineer in less than a year, and later to senior engineer

PROJECT

Self-hosted Taiga on AWS | github.com/VladimirTheSecond/taiga

2026, ongoing

- Designed and deployed the Taiga kanban platform on AWS (Frankfurt, EC2) fully as code: Terraform for infrastructure, Ansible for configuration, Docker Compose for the runtime

- Secured traffic with Nginx as a reverse proxy and automatic Let's Encrypt certificates
- Next step: migration to Kubernetes (k3s)

Stack: AWS (EC2), Terraform, Ansible, Docker Compose, Nginx, Let's Encrypt, Linux, GitHub

EDUCATION

- Retraining as Linux System Administrator (diploma of professional retraining) | Skillfactory | Oct 2022 to Sep 2023
- Specialist Degree (Diploma) in Public Relations | Pskov State University | 2008 to 2013

CERTIFICATIONS

- Kubernetes Fundamentals | Slurm | Oct 2025
- Advanced DevOps Methods | MTS Teta | Dec 2023
- Arenadata DB for Developers (Greenplum) | Arenadata | Apr 2023
- Big Data Practical Course (Hadoop) | BigData Team | Jan 2022

SKILLS

- **Infrastructure & Cloud:** Linux (Oracle Linux in production, Ubuntu daily), Docker, OpenStack (user), AWS EC2 (project), Terraform (project), Kubernetes (course)
- **CI/CD & Automation:** GitLab CI, Ansible, Git, Artifactory, Harbor
- **Big Data & DataOps:** Apache Airflow, Apache Spark, Hadoop; first hands-on contact with Kafka, MinIO, ClickHouse
- **Monitoring & Security:** Prometheus, VictoriaMetrics, Grafana, HashiCorp Vault, Kerberos, Trivy, Semgrep
- **Scripting & Databases:** Bash, Python, SQL, PostgreSQL, Oracle PL/SQL, Teradata
- **Operations:** Incident management (Remedy ITSM), root cause analysis, Jira, Confluence

LANGUAGES

- Russian: native
- English: full professional proficiency (C1)
- German: upper intermediate (B2), intensive course towards C1
