German B2 (target C1) · English C1

SUMMARY

Technical support and operations engineer with 7 years of experience in IT and telecommunications.

I have handled thousands of tickets with strict SLAs (down to 12 hours) and I am always ready for on-call duty, whether it is Christmas, the middle of the night or an emergency.

I work on incidents from the first report to fixing the root cause. Linux, databases, networks. I cut the number of incidents on a reporting platform in half through automation, documentation and a systematic approach to finding the source of problems. Before IT and telecoms, I diagnosed vehicle electrics and fuel systems (personal vehicle intake with the customer, diagnostics, troubleshooting, explaining the cause and the work done).

LANGUAGES & EDUCATION

- German: B2 (intensive course, C1 by end of 2026) · English: C1
- Retraining as Linux System Administrator | Skillfactory | Oct 2022 to Sep 2023 (apostille)
- Specialist Degree in Public Relations | Pskov State University | 2008 to 2013 (apostille)

SKILLS

- **Ticketing & ITSM:** Remedy ITSM, Jira, Confluence, Help Desk, Service Desk
- **Linux:** good knowledge of Red Hat Enterprise Linux (Oracle Linux) and Debian (Ubuntu)
- **Networking:** firewall, nmap, traceroute, dig, tcpdump, curl
- **DevOps tools:** GitLab CI, Artifactory, Harbor, Docker
- **IaC:** Ansible
- **Automation:** Bash, Python
- **Methods:** familiar with ITIL, DevOps, DevSecOps, Agile (Scrum)
- **Databases:** Oracle, PostgreSQL, Teradata, SAS
- **Big Data:** Hadoop, Spark, Airflow
- **Monitoring:** Prometheus, Grafana
- **Cloud (project/course):** Terraform, AWS, Kubernetes

PROFESSIONAL EXPERIENCE

Since Jun 2026 · Intensive German course, Lingunection Sprachinstitut, Leipzig

DevOps Engineer | MTS Web Services (IT subsidiary of MTS), Russia
Nov 2023 to Jun 2026

Sole DevOps engineer in a 17-person big data team, partly also for a second product.

- Owned 20 Linux servers (edge nodes of a Hadoop cluster) from provisioning to operations, configured with Ansible and GitLab Runners
- Wrote pipelines from scratch: deployment of Airflow DAGs, building Python packages and delivering them to Artifactory, building Docker images and delivering them to Harbor, built-in DevSecOps scans
- Set up monitoring and alerting for Airflow DAGs so that failures on the Hadoop cluster become visible 30 minutes before a full outage
- Wrote documentation used by more than 100 colleagues; trained data engineers and analysts in DevOps tools and helped them understand how the platform works
- Security Champion: introduced vulnerability scanners (Trivy, Semgrep) into GitLab pipelines
- Handled 5 to 15 network access requests per month (chat, Jira): checked access from our side (telnet, nmap, ping, traceroute), filed firewall change requests (TCP, ports, subnets/addresses) with the network team; if access still failed, gathered the full picture (netstat, iptables, traceroute) and returned the ticket with facts

DWH Engineer (Reporting Platform Support) | MTS Web Services, Russia

Aug 2021 to Nov 2023

Support of the reporting platform for internal customers across the whole company (MTS employs about 27,000 people).

- Worked with tickets in Remedy ITSM every day (Help Desk, later Service Desk portals): assignee and on-call for urgent issues; SLA 3 working days for regular tickets, 12 hours for urgent ones
- Owned tickets end to end: status updates, contact with customers by email and phone, requesting missing information, resolution, feedback
- Found and fixed the cause myself: the script's data source, a run before the data was loaded into the database, a bug in the script, changed data. Fixed the script, re-ran it, verified. Complex cases (rarely) handed over to data engineers
- Reduced incidents from 2,000+ in the first year to under 1,500 in the second and under 1,000 in the third: automation of recurring errors, documentation, how-to guides, FAQ (50+ articles in Confluence), explaining to customers how the product works
- After a full Teradata outage (2022), coordinated recovery on the team's side: all data marts available again within about 2 weeks; co-wrote the post-mortem
- Completed retraining as a Linux administrator alongside the job, then moved into DevOps

Senior Service Engineer | Rostelecom, Pskov, Russia

Aug 2019 to Aug 2021

- Diagnosed and fixed faults in FTTB and PON networks serving several thousand subscribers, 3 to 7 tickets per day, each with direct subscriber contact
- Career path: cable jointer → telecommunications engineer (Feb 2020) → service engineer (Dec 2020) → senior service engineer, customer service group (May 2021)

Automotive Diagnostic Technician, LPG Systems and Electrics | Car workshop, Pskov

2015 to 2019

- Personal vehicle intake: recording customer complaints, diagnostics (5 to 7 cars per day), explaining results to the customer
- Repair of electrics and fuel systems (2 to 3 cars per day)

PROJECT

Self-hosted Taiga on AWS | github.com/VladimirTheSecond/taiga | Terraform, Ansible, Docker Compose

COURSES

- Kubernetes | Slurm | 2025
- DevOps | MTS Teta | 2023
- Arenadata DB | Arenadata | 2023
- Big Data | BigData Team | 2022

EARLIER JOBS (NON-IT)

- 2011 to 2015 · Field service, bartender, event technician, own rehearsal studio

OTHER

- Driving licence (category B)
